## Thomson - the Choice for Optimized Motion Solutions

Often the ideal design solution is not about finding the fastest, sturdiest, most accurate or even the least expensive option. Rather, the ideal solution is the optimal balance of performance, life and cost.

### Quickly Configure the Optimal Mechanical Motion Solution

Thomson has several advantages that makes us the supplier of choice for motion control technology.

- Thomson owns the broadest standard product offering of mechanical motion technologies in the industry.
- Modified versions of standard product or white sheet design solutions are routine for us.
- Choose Thomson and gain access to over 70 years of global application experience in industries including packaging, factory automation, material handling, medical, clean energy, printing, automotive, machine tool, aerospace and defense.
- As part of Fortive Corporation, we are financially strong and unique in our ability to bring together control, drive, motor, power transmission and precision linear motion technologies.

### A Name You Can Trust

A wealth of product and application information as well as 3D models, software tools, our distributor locator and global contact information is available at [www.thomsonlinear.com/contact\\_us](http://www.thomsonlinear.com/contact_us). Talk to us early in the design process to see how Thomson can help identify the optimal balance of performance, life and cost for your next application. And, call us or any of our 2000+ distribution partners around the world for fast delivery of replacement parts.

# Thomson Linear Motion Systems

The optimal balance of performance, life and cost

Thomson has one of the most competitive and comprehensive product portfolios available today. The range covers the smallest and most compact linear motion systems to the biggest and most robust. Our wide range of guide and drive systems can be configured economically and work in harsh environments, at high speeds, and in high-precision applications.

# RediMount<sup>™</sup> Adapter Kit

## Fast, Accurate and Hassle-Free Motor Mounting

The popular and easy to use Thomson RediMount motor mounting adapter kit is now available as standard on all Thomson linear motion systems, making the whole process of choosing and mounting a motor much faster and easier.

Designed to accommodate more than 500 different motors and gearheads from a variety of manufacturers, the Thomson RediMount adapter kit eliminates the need for custom-made, intermediate flanges between your choice of linear motion system and motor or gearhead. With the optimized RediMount kit, you'll be ready to order your complete linear motion system for your application within five minutes.

A RediMount kit includes a flange and coupling to mount to your preferred motor or gearhead. The flange has been machined to exactly match the motor pilot and mounting holes, while the coupling has been bored to match the diameter of the motor shaft and the corresponding shaft key. All necessary hardware is included.

Each RediMount kit alternative is identified by a three-character code that can be designated within the overall linear motion system part number. You can configure this RediMount code as well as your entire part number on [www.LinearMotioneering.com](http://www.LinearMotioneering.com). There, you can enter your application parameters to configure a solution that provides an optimal balance of performance, life, and cost. Once you've sized your system and ordered and received your linear motion system, installation is easy.

The linear motion system will arrive with the motor interface flange mounted to the unit. In a separate bag, you will find the motor coupling half, the motor bolts and the plug.

Insert the motor onto the interface flange, attach and tighten the included motor bolts, and tighten the coupling to the motor shaft. Finally, secure the plug over the coupling access window.

# Simple Product Selection with Linear Motioneer®

## Online Product Selection

The Linear Motioneer sizing and selection tool is designed to make it simple to choose the right linear motion system for your application. Simply enter the basic parameters for your application and let Linear Motioneer do all the work. Once a solution is selected, you can add accessories and options, download a CAD model, and get price and delivery time.

1. Visit [www.LinearMotioneer.com](http://www.LinearMotioneer.com).
2. Enter your application parameters.
3. Choose a unit from the list of solutions, optimized for your application.
4. Add options and accessories to create your bill of material, with price and lead time.
5. Request a quote. Costs for shipping, packaging and import taxes should be requested directly from Thomson Customer Support.
6. Place an order.

# Linear Motion Systems Applications

## Decades of Application Experience

Thomson has one of the broadest ranges of linear motion systems on the market. We also provide a large number of components and accessories, such as gearheads, intermediate shafts, mounting kits and sensors to help optimize a solution for your application.

### Handling and packaging

Use linear motion systems for economical point-to-point transport motion. Speed, long stroke and/or environmental protection may be critical parameters that many times can be addressed by using Thomson linear motion systems.

### Printing and scanning

Linear motion systems can cover the large areas, high speeds and acceleration rates at the accuracy required for this type of equipment.

### Food processing

Fully enclosed units, also available with enhanced environmental protection, make linear motion systems suited for the often wet and humid conditions in the food industry where cleaning with high-pressure water is common.

### Filling and dispensing

Relatively short, rapid movements at high duty cycle, low load and medium accuracy are common in these types of machines. Linear motion systems are often used in these applications and especially those with belt drives.

# Linear Motion Systems Applications

## Decades of Application Experience

### Factory automation

Factory automation is a general term for a large range of applications, and the requirements for speed, load, accuracy and other parameters vary. The variety of Thomson linear motion systems makes them a versatile and flexible building block in the design of factory automation equipment.

### Machining, test and measurement

This type of equipment requires linear motion systems with the highest accuracy, stiffness and rigidity.

### Lab automation

In this type of equipment, relatively light loads have to be moved short distances accurately and quickly. It is also important to keep the smallest possible footprint and not contaminate the environment. Thomson offers several linear motion systems that are well suited for these types of applications.

### Medical diagnostics/treatment equipment

Given the precision of these devices, linear unit systems need to be quiet and smooth, while at the same time, able to handle high loads accurately. Reliability, safety and low maintenance are also crucial parameters in medical equipment. Thomson has successfully supplied linear motion systems to this type of equipment for many decades.

### Patient handling/ergonomic lifting devices

You can find linear motion systems in many types of adjustable tables, lifting devices, examination equipment and different kind of manipulators.

# Linear Motion Systems with Ball Screw Drive and Ball Guide

## Overview

### PowerLine WM

#### Features

- Can be installed in any orientation
- Patented guide system
- Patented self-adjusting plastic cover band<sup>1</sup>
- Patented screw support system

<sup>1</sup> Not on WM40 units

### WM-Series Technical Presentation

#### Screw support

Patented screw support system permits high speeds at long stroke lengths while reducing the available stroke with a minimum.

#### Double ball nuts

Double pre-tensioned ball nuts improve the accuracy and allow re-tensioning, increasing the lifetime of the unit.

#### Central lubrication

One central lubrication point on the carriage services the entire unit resulting in a minimum maintenance requirement.

#### Ball guides

Integrated patented ball guides with hardened steel tracks for optimum performance.

#### Ball cages

The balls in the ball guides are protected by a ball cage which ensures a long life.

#### Cover band

The patented self-adjusting cover band protect the unit from the penetration of dirt, dust and liquids.

Note! the unit is pictured without a RediMount<sup>™</sup> flange

# WM40S

## Ball Screw Drive, Ball Guide, Single Ball Nut

- » Ordering key - see page 193
- » Accessories - see page 131
- » Additional data - see page 188

### General Specifications

Parameter	WM40S
Profile size (w × h) [mm]	40 × 40
Type of screw	ball screw with single nut
Carriage sealing system	plastic cover band
Screw supports	included in all units that require screw supports
Lubrication	central lubrication of all parts that require lubrication
Included accessories	4 × mounting clamps

### Performance Specifications

for Units with Single Standard Carriage (N)<sup>1</sup>

Parameter	WM40S
Stroke length (Smax), maximum	[mm] 2000
Total length (L tot), maximum	[mm] 2300
Linear speed, maximum	[m/s] 0,25
Acceleration, maximum	[m/s <sup>2</sup> ] 20
Repeatability	[± mm] 0,02
Input speed, maximum	[rpm] 3000
Operation temperature limits	[°C] 0 – 80
Dynamic load (Fx), maximum	[N] 1000
Dynamic load (Fy), maximum	[N] 450
Dynamic load (Fz), maximum	[N] 600
Dynamic load torque (Mx), maximum	[Nm] 10
Dynamic load torque (My), maximum	[Nm] 30
Dynamic load torque (Mz), maximum	[Nm] 30
Drive shaft force (Frd), maximum <sup>2</sup>	[N] 100
Input/drive shaft torque (Mta), maximum	[Nm] 3
Ball screw diameter (do)	[mm] 12
Ball screw lead (p)	[mm] 5
Weight of unit with zero stroke of every 100 mm of stroke of each carriage	[kg] 1,50 0,30 0,36

<sup>1</sup> See next page for deviating values of units with other carriage types.

<sup>2</sup> Only relevant for units without RediMount flange.

### Carriage Idle Torque (M idle) [Nm]

Input speed [rpm]	Screw lead [mm]
	p = 5
150	0,3
1500	0,5
3000	0,8

M idle = the input torque needed to move the carriage with no load on it.

### Deflection of the Profile

A mounting clamp must be installed at least every 750 mm to be able to operate at maximum load. Less clamps may be required if less load is being operated, see the additional technical data for more information.

Flange length (Lrm) [mm]	59	94
Flange square (Srm) [mm]	60	139
Flange weight * [kg]		1,86

\* Max. weight including coupling and fastening screws

Performance Specifications for Units with Double Long Carriage (M)			
Parameter	WM40D	B [mm]	C [mm]
Stroke length (Smax), maximum [mm]	65	35	320
Total length (L tot), maximum [mm]	65	45	330
Minimum distance between carriages (Lc) [mm]	70	60	350

Parameter	WM40D
Stroke length (Smax), maximum [mm]	1725
Total length (L tot), maximum [mm]	2300
Minimum distance between carriages (Lc) [mm]	225
Dynamic load (Fy), maximum [N]	900
Dynamic load (Fz), maximum [N]	1200
Dynamic load torque (My), maximum [Nm]	$L_c^1 \times 0,45$
Dynamic load torque (Mz), maximum [Nm]	$L_c^1 \times 0,6$
Force required to move second carriage [N]	4
Total length (L tot) [mm]	$S_{max} + C + L_c$

<sup>1</sup> Value in mm

# WM60D

## Ball Screw Drive, Ball Guide, Double Ball Nuts

» Ordering key - see page 193  
 » Accessories - see page 131  
 » Additional data - see page 188

### General Specifications

Parameter	WM60D
Profile size (w × h) [mm]	60 × 60
Type of screw	ball screw with double nut
Carriage sealing system	self-adjusting plastic cover band
Screw supports	included in all units that require screw supports
Lubrication	central lubrication of all parts that require lubrication
Included accessories	4 × mounting clamps

### Performance Specifications

for Units with Single Standard Carriage (N)<sup>1</sup>

Parameter	WM60D
Stroke length (Smax), maximum [mm]	
screw lead 5, 20 mm	11000
screw lead 50 mm	5000
Total length (L tot), maximum [mm]	
screw lead 5, 20 mm	12130
screw lead 50 mm	5780
Linear speed, maximum [m/s]	2,5
Acceleration, maximum [m/s <sup>2</sup> ]	20
Repeatability [± mm]	0,01
Input speed, maximum [rpm]	3000
Operation temperature limits [°C]	0 – 80
Dynamic load (Fx), maximum [N]	4000
Dynamic load (Fy), maximum [N]	2000
Dynamic load (Fz), maximum [N]	2000
Dynamic load torque (Mx), maximum [Nm]	100
Dynamic load torque (My), maximum [Nm]	200
Dynamic load torque (Mz), maximum [Nm]	200
Drive shaft force (Frd), maximum <sup>2</sup> [N]	500
Input/drive shaft torque (Mta), maximum [Nm]	35
Ball screw diameter (d0)	[mm]
Ball screw lead (p)	[mm]
Weight	[kg]
of unit with zero stroke	6,16
of every 100 mm of stroke	0,65
of each carriage	1,99

<sup>1</sup> See next page for deviating values of units with other carriage types.

<sup>2</sup> Only relevant for units without RediMount flange.

### Carriage Idle Torque (M idle) [Nm]

Input speed [rpm]	Screw lead [mm]		
	p = 5	p = 20	p = 50
150	0,8	1,3	1,6
1500	1,4	2,0	2,4
3000	1,8	2,3	2,6

M idle = the input torque needed to move the carriage with no load on it.

### Deflection of the Profile

A mounting clamp must be installed at least every 750 mm to be able to operate at maximum load. Less clamps may be required if less load is being operated, see the additional technical data for more information. Units with a profile length over 6300 mm consist of two profiles where the joint between the two profiles must be adequately supported on both sides.

Stroke length (Smax), maximum screw lead 5, 10, 20 mm	[mm] 10260
screw lead 50 mm	4720
Total length ( $L_{tot}$ ), maximum screw lead 5, 10, 20 mm	[mm] 11495
screw lead 50 mm	5645
Minimum distance between carriages ( $L_C$ )	[mm] 280
Dynamic load ( $F_y$ ), maximum	[N] 4200
Dynamic load ( $F_z$ ), maximum	[N] 4200
Dynamic load torque ( $M_y$ ), maximum	[Nm] $L_C^1 \times 2,1$
Dynamic load torque ( $M_z$ ), maximum	[Nm] $L_C^1 \times 2,1$
Force required to move second carriage	[N] 22,5
Total length ( $L_{tot}$ )	[mm] $S_{max} + C + L_C$

<sup>1</sup> Value in mm

# WM120D

## Ball Screw Drive, Ball Guide, Double Ball Nuts

- » Ordering key - see page 193
- » Accessories - see page 131
- » Additional data - see page 188

### General Specifications

Parameter	WM120D
Profile size (w × h) [mm]	120 × 120
Type of screw	ball screw with double nuts
Carriage sealing system	self-adjusting plastic cover band
Screw supports	included in all units that require screw supports
Lubrication	central lubrication of all parts that require lubrication
Included accessories	4 × mounting clamps

### Performance Specifications

for Units with Single Standard Carriage (N)<sup>1</sup>

Parameter	WM120D
Stroke length (Smax), maximum screw lead 5, 10, 20 mm	[mm] 11000
screw lead 40 mm	4765
Total length (L tot), maximum screw lead 5, 10, 20 mm	[mm] 12415
screw lead 40 mm	5780
Linear speed, maximum	[m/s] 2,0
Acceleration, maximum	[m/s <sup>2</sup> ] 20
Repeatability	[± mm] 0,01
Input speed, maximum	[rpm] 3000
Operation temperature limits	[°C] 0 – 80
Dynamic load (Fx), maximum screw lead 5, 10, 20 mm	[N] 12000
screw lead 40 mm	8000
Dynamic load (Fy), maximum	[N] 6000
Dynamic load (Fz), maximum	[N] 6000
Dynamic load torque (Mx), maximum	[Nm] 500
Dynamic load torque (My), maximum	[Nm] 600
Dynamic load torque (Mz), maximum	[Nm] 600
Drive shaft force (Frd), maximum <sup>2</sup>	[N] 1000
Input/drive shaft torque (Mta), maximum	[Nm] 80
Ball screw diameter (do)	[mm] 32
Ball screw lead (p)	[mm] 5, 10, 20, 40
Weight of unit with zero stroke	[kg] 25,91
of every 100 mm of stroke	1,93
of each carriage	9,25

<sup>1</sup> See next page for deviating values of units with other carriage types.

<sup>2</sup> Only relevant for units without RediMount flange.

### Carriage Idle Torque (M idle) [Nm]

Input speed [rpm]	Screw lead [mm]			
	p = 5	p = 10	p = 20	p = 40
150	1,4	2,0	2,3	2,4
1500	2,5	3,0	3,3	3,8
3000	3,0	3,7	4,0	4,3

M idle = the input torque needed to move the carriage with no load on it.

### Deflection of the Profile

A mounting clamp must be installed at least every 750 mm to be able to operate at maximum load. Less clamps may be required if less load is being operated, see the additional technical data for more information. Units with a profile length over 5400 mm consist of two profiles where the joint between the two profiles must be adequately supported on both sides.

Ball screw lead (p)	[mm] 5, 10, 20, 40
Weight of unit with zero stroke of every 100 mm of stroke of each carriage	[kg] 29,5 2,7 11,5

<sup>1</sup> See next page for deviating values of units with other carriage types.

<sup>2</sup> Only relevant for units without RediMount flange.

### Carriage Idle Torque (M idle) [Nm]

Input speed [rpm]	Screw lead [mm]			
	p = 5	p = 10	p = 20	p = 40
150	1,6	2,2	2,5	2,8
1500	2,7	3,2	3,4	4,0
3000	3,2	4,0	4,2	4,5

M idle = the input torque needed to move the carriage with no load on it.

### Deflection of the Profile

A mounting clamp must be installed at least every 750 mm to be able to operate at maximum load. Less clamps may be required if less load is being operated, see the additional technical data for more information.

# Linear Motion Systems with Ball Screw Drive and Slide Guide

## Overview

### M-Series Technical Presentation

#### Cover band

The self-adjusting magnetically sealed stainless steel cover band protects the unit from the penetration of dirt, dust and liquids.

#### Environmental protection

The standard unit can operate in harsh environments but is also available in a wash down version for environments that are dusty, dirty and/or wet.

#### Ball screw drive

The ball screw ensures high accuracy and efficiency and the optional screw supports enable higher speeds.

#### Prism slide guides

The patented self-aligning prism slide guides are accurate, durable and are resistant to vibrations and shock loads.

**Note!** the unit is pictured without a RediMount™ flange

# M55

## Ball Screw Drive, Slide Guide

## Ball Screw Drive, Slide Guide

» Ordering key - see page 201  
 » Accessories - see page 131  
 » Additional data - see page 179

### General Specifications

Parameter	M100
Profile size (w × h) [mm]	108 × 100
Type of screw	ball screw with single nut
Carriage sealing system	self-adjusting steel cover band
Screw supports	number of screw supports to be specified by customer at order
Lubrication	lubrication of ball screw
Included accessories	none

### Performance Specifications

for Units with Single Standard Carriage (A)<sup>1</sup>

Parameter	M100
Stroke length (Smax), maximum screw lead 5, 10 mm [mm]	5578
screw lead 25 mm	4378
Total length (L tot), maximum screw lead 5, 10 mm [mm]	5974
screw lead 25 mm	4774
Linear speed, maximum [m/s]	1,6
Acceleration, maximum [m/s <sup>2</sup> ]	8
Repeatability [± mm]	0,05
Input speed, maximum [rpm]	4000
Operation temperature limits [°C]	-20 – 70
Dynamic load (Fx), maximum [N]	5000
Dynamic load (Fy), maximum [N]	3005
Dynamic load (Fz), maximum [N]	3005
Dynamic load torque (Mx), maximum [Nm]	117
Dynamic load torque (My), maximum [Nm]	279
Dynamic load torque (Mz), maximum [Nm]	279
Drive shaft force (Frd), maximum <sup>2</sup> [N]	1000
Input/drive shaft torque (Mta), maximum [Nm]	45
Screw diameter (do)	[mm] 25
Screw lead (p)	[mm] 5, 10, 25
Weight of unit with zero stroke [kg]	12,87
of every 100 mm of stroke	1,42
of carriage	3,50
of option single screw support	1,86
of option double screw supports	4,42

<sup>1</sup> See next page for deviating values of units with other carriage types.

<sup>2</sup> Only relevant for units without RediMount flange.

### Carriage Idle Torque (M idle) [Nm]

Input speed [rpm]	Screw lead [mm]		
	p = 5	p = 10	p = 25
500 - no screw supports	0,15	0,25	0,55
500 - with screw supports	0,25	0,40	0,85

M idle = the input torque needed to move the carriage with no load on it.

## Overview

### SpeedLine WH

WH40

#### Features

- Can be installed in any orientation
- Stroke up to 2 m
- Acceleration up to 40 m/s<sup>2</sup>
- Compact

Parameter	WH40
Profile size (width x height) [mm]	40 x 40
Stroke length (Smax), maximum [mm]	2000
Linear speed, maximum [m/s]	3,0
Dynamic carriage load (Fz), maximum [N]	600
Remarks	no cover band
Page	78

### PowerLine WMZ

WM80Z

#### Features

- Can be installed in any orientation
- Stroke up to 5,5 m
- Speed up to 5 m/s
- Patented plastic cover band

Parameter	WM60Z	WM80Z
Profile size (width x height) [mm]	60 x 60	80 x 80
Stroke length (Smax), maximum [mm]	4000	5500
Linear speed, maximum [m/s]	2,5	5,0
Dynamic carriage load (Fz), maximum [N]	1400	2100
Remarks	-	-

## Overview

### ForceLine MLSM

#### Features

- Can be installed in any orientation
- Patented plastic cover band
- High load capabilities
- Low profile height

Parameter	MLSM80Z
Profile size (width x height) [mm]	240 x 85
Stroke length (Smax), maximum [mm]	5900
Linear speed, maximum [m/s]	5,0
Dynamic carriage load (Fz), maximum [N]	6400
Remarks	-
Page	92

## WMZ-Series Technical Presentation

#### Cover band

The cover band protects the interior of the unit from the penetration of dirt, dust and liquids.

#### Central lubrication

One central lubrication point on the carriage services the entire unit resulting in a minimum maintenance requirement.

#### Belt drive

The belt is protected from the outside ensuring long, accurate and safe operation.

#### Ball guides

Integrated patented ball guides with hardened steel tracks for optimum performance.

**Note! the unit is pictured without a RediMount™ flange**

# WH40

## Belt Drive, Ball Guide

» Ordering key - see page 202  
 » Accessories - see page 131  
 » Additional data - see page 179

### General Specifications

Parameter	WH40
Profile size (w × h) [mm]	40 × 40
Type of belt	10 AT 5
Carriage sealing system	none
Adjustable belt tensioning	the belt can be retensioned by the customer if necessary
Lubrication	central lubrication of all parts that require lubrication
Included accessories	4 × mounting clamps

### Performance Specifications

for Units with Single Standard Carriage (N)<sup>1</sup>

Parameter	WH40
Stroke length (Smax), maximum	[mm] 2000
Total length (L tot), maximum	[mm] 2265
Linear speed, maximum	[m/s] 3,0
Acceleration, maximum	[m/s <sup>2</sup> ] 40
Repeatability	[± mm] 0,05
Input speed, maximum	[rpm] 1800
Operation temperature limits	[°C] 0 – 80
Dynamic load (Fx), maximum	[N] 315 <sup>2</sup>
Dynamic load (Fy), maximum	[N] 450
Dynamic load (Fz), maximum	[N] 600
Dynamic load torque (Mx), maximum	[Nm] 10
Dynamic load torque (My), maximum	[Nm] 30
Dynamic load torque (Mz), maximum	[Nm] 30
Drive shaft force (Frd), maximum <sup>3</sup>	[N] 100
Input/drive shaft torque (Mta), maximum	[Nm] 6
Pulley diameter	[mm] 31,83
Stroke per shaft revolution	[mm] 100
Weight of unit with zero stroke of every 100 mm of stroke of each carriage	[kg] 1,19 0,15 0,28

<sup>1</sup> See next page for deviating values of units with other carriage types.

<sup>2</sup> See diagram Force Fx.

<sup>3</sup> Only relevant for units without RediMount flange.

### Carriage Idle Torque, (M idle) [Nm]

Input speed [rpm]	Idle torque [Nm]
150	0,1
900	0,3
1800	0,6

M idle = the input torque needed to move the carriage with no load on it.

### Deflection of the Profile

A mounting clamp must be installed at least every 750 mm to be able to operate at maximum load. Less clamps may be required if less load is being operated, see the additional technical data for more information.

### Force Fx as a Function of the Speed

### General Specifications

Parameter	M75 / T75
Profile size (w × h) [mm]	86 × 75
Type of belt	STD5-40
Carriage sealing system	self-adjusting steel cover band
Adjustable belt tensioning	the belt can be retensioned by the customer if necessary
Lubrication	lubrication of ball guide carriages
Included accessories	none

### Performance Specifications

for Units with Single Standard Carriage (A)<sup>1</sup>

Parameter	M75
Stroke length (Smax), maximum	[mm] 12000
Total length (L tot), maximum	[mm] 12368
Linear speed, maximum	[m/s] 5,0
Acceleration, maximum	[m/s <sup>2</sup> ] 40
Repeatability	[± mm] 0,1
Input speed, maximum	[rpm] 2300
Operation temperature limits	[°C] -20 – 70
Dynamic load (Fx), maximum < 2,5 m/s	[N] 900
> 2,5 m/s	450
Dynamic load (Fy), maximum	[N] 1750
Dynamic load (Fz), maximum	[N] 1750
Dynamic load torque (Mx), maximum	[Nm] 16
Dynamic load torque (My), maximum	[Nm] 84
Dynamic load torque (Mz), maximum	[Nm] 84
Drive shaft force (Frd), maximum <sup>2</sup>	[N] 600
Input/drive shaft torque (Mta), maximum	[Nm] 30
Pulley diameter	[mm] 41,38
Stroke per shaft revolution	[mm] 130
Weight of unit with zero stroke of every 100 mm of stroke of carriage	[kg] 7,50 0,88 2,00

<sup>1</sup> See next page for deviating values of units with other carriage types.

<sup>2</sup> Only relevant for units without RediMount flange.

### Carriage Idle Torque (M idle) [Nm]

Input speed [rpm]	Single Carriage	Double Carriages
150	1,0	1,9

M idle = the input torque needed to move the carriage with no load on it.

# Linear Motion Systems with Belt Drive and Slide Guide

## Overview

### M-Series Technical Presentation

#### Cover band

The self-adjusting magnetically sealed stainless steel cover band protects the unit from the penetration of dirt, dust and liquids.

#### Environmental protection

The standard unit can operate in harsh environments but is also available in wash down or enhanced wash down protected versions for the toughest environments.

#### Belt drive

The belt runs on the inside of the profile and can easily be re-tensioned without removing the load from the carriage.

#### Prism slide guides

The patented self-aligning prism slide guides are accurate, durable and are resistant to vibrations and shock loads.

**Note!** the unit is pictured without a RediMount™ flange

Remarks	external wheel guides no cover band	external wheel guides no cover band	external wheel guides no cover band
Page	106	108	110

## WH-Series Technical Presentation

### Belt tensioning

The belt can easily be replaced or re-tensioned from the outside of the unit without the load being removed from the carriage.

### Belt drive

The steel reinforced belt is wear resistant, highly efficient and very accurate even at high speeds and loads.

### Wheel guides

The H-type arrangement of the guides allows fast moves and high forces and moments.

### Central lubrication

The guides are lubricated from a central point that is easy and fast to access.

**Note!** the unit is pictured without a RediMount<sup>TM</sup> flange

# Linear Units with Belt Drive and Wheel Guide

## Overview

### ForceLine MSLH

#### Features

- Can be installed in any orientation
- Patented plastic cover band
- Speed up to 10 m/s
- Low profile height

Parameter	MLSH60Z
Profile size (width × height) [mm]	160 × 65
Stroke length (Smax), maximum [mm]	5500
Linear speed, maximum [m/s]	10,0
Dynamic carriage load (Fz), maximum [N]	3000
Remarks	internal wheel guides
Page	112

## MLSH-Series Technical Presentation

### Belt tensioning

The belt can easily be re-tensioned from the outside of the unit without the load being removed from the carriage.

### Belt drive

The highly dynamic and accurate belt is protected by the cover band ensuring long and trouble free operation.

### Cover band

The patented cover band protects the interior of the unit from the penetration of dirt, dust and liquids.

### Wheel guides

The robust wheel guides run inside of the profile providing superior motion dynamics.

### Unique profile

The unique design of the profile guarantees the highest performance and protection of the guides and belt.

**Note! the unit is pictured without a RediMount™ flange**

# WH50

## Belt Drive, Wheel Guide

» Ordering key - see page 207  
 » Accessories - see page 131  
 » Additional data - see page 180

### General Specifications

Parameter	WH50
Profile size (w × h) [mm]	50 × 50
Type of belt	16ATL5
Carriage sealing system	none
Adjustable belt tensioning	the belt can be retensioned by the customer if necessary
Lubrication	lubrication of guiding surfaces
Included accessories	4 × mounting clamps

### Performance Specifications

for Units with Single Standard Carriage (N)<sup>1</sup>

Parameter	WH50
Stroke length (Smax), maximum	[mm] 3000
Total length (L tot), maximum	[mm] 3440
Linear speed, maximum	[m/s] 6,5
Acceleration, maximum	[m/s <sup>2</sup> ] 40
Repeatability	[± mm] 0,05
Input speed, maximum	[rpm] 3250
Operation temperature limits	[°C] 0 – 80
Dynamic load (Fx), maximum	[N] 670 <sup>2</sup>
Dynamic load (Fy), maximum	[N] 415
Dynamic load (Fz), maximum	[N] 730
Dynamic load torque (Mx), maximum	[Nm] 16
Dynamic load torque (My), maximum	[Nm] 87
Dynamic load torque (Mz), maximum	[Nm] 50
Drive shaft force (Frd), maximum <sup>3</sup>	[N] 150
Input/drive shaft torque (Mta), maximum	[Nm] 17
Pulley diameter	[mm] 38,2
Stroke per shaft revolution	[mm] 120
Weight of unit with zero stroke of every 100 mm of stroke of each carriage	[kg] 3,50 0,44 0,90

<sup>1</sup> See next page for deviating values of units with other carriage types.

<sup>2</sup> See diagram Force Fx.

<sup>3</sup> Only relevant for units without RediMount flange.

### Carriage Idle Torque, (M idle) [Nm]

Input speed [rpm]	Idle torque [Nm]
150	1,7
1500	2,4
3250	3,8

M idle = the input torque needed to move the carriage with no load on it.

### Deflection of the Profile

A mounting clamp must be installed at least every 750 mm to be able to operate at maximum load. Less clamps may be required if less load is being operated, see the additional technical data for more information.

\* Max. weight including coupling and fastening screws

**Performance Specifications**

for Units with Single Long Carriage (L)

Parameter	WHZ80
Stroke length (Smax), maximum [mm]	3000
Total length (L tot), maximum [mm]	3580
Carriage length [mm]	450
Dynamic load torque (My), maximum [Nm]	345
Dynamic load torque (Mz), maximum [Nm]	150
Weight [kg]	7,4

**Performance Specifications**

for Units with Double Standard Carriage (Z)

Parameter	WHZ80
Stroke length (Smax), maximum [mm]	2870
Total length (L tot), maximum [mm]	3580
Minimum distance between carriages (Lc) [mm]	300
Dynamic load (Fy), maximum [N]	1764
Dynamic load (Fz), maximum [N]	4200
Dynamic load torque (My), maximum [Nm]	$Lc^1 \times 0,882$
Dynamic load torque (Mz), maximum [Nm]	$Lc^1 \times 2,1$
Force required to move second carriage [N]	20
Total length (L tot) [mm]	$S_{max} + 410 + Lc$

<sup>1</sup> Value in mm<sup>2</sup> Second carriage is always a long carriage

### Ball Screw Drive, Slide Guide

» Ordering key - see page 209  
 » Accessories - see page 131  
 » Additional data - see page 181

#### General Specifications

Parameter	Z2
Profile size (w × h) [mm]	188 × 150
Type of screw	ball screw with single nut
Sealing system	none
Screw supports	none
Lubrication	lubrication of screw and slide surfaces
Included accessories	none

#### Performance Specifications

Parameter	Z2
Stroke length (Smax), maximum	[mm] 1500
Linear speed, maximum	[m/s] 1,25
Acceleration, maximum	[m/s <sup>2</sup> ] 8
Repeatability	[± mm] 0,1
Input speed, maximum	
screw diameter/lead [mm] 25/10, 25/25	[rpm] 3000
screw diameter/lead [mm] 32/20	2500
Operation temperature limits	[°C] -20 – 70
Dynamic load (Fz), maximum	[N]
screw diameter/lead [mm] 25/10, 25/25	5000
screw diameter/lead [mm] 32/20	7500
Dynamic load torque (Mx), maximum	[Nm] 700
Dynamic load torque (My), maximum	[Nm] 700
Dynamic load torque (Mz), maximum	[Nm] 330
Drive shaft force (Frd), maximum	[N]
screw diameter/lead [mm] 25/10, 25/25	1000
screw diameter/lead [mm] 32/20	1200
Input/drive shaft torque (Mta), maximum	[Nm]
screw diameter/lead [mm] 25/10, 25/25	45
screw diameter/lead [mm] 32/20	93
Screw versions, diameter (do) / lead (p)	[mm] 25/10, 25/25, 32/20
Weight	[kg]
of unit with zero stroke, ball screw ø 25 mm	19,00
of unit with zero stroke, ball screw ø 32 mm	23,64
of every 100 mm of stroke, ball screw ø 25 mm	2,50
of every 100 mm of stroke, ball screw ø 32 mm	2,80

#### Idle Torque (M idle) [Nm]

Input speed [rpm]	Screw diameter/lead [mm]		
	d0 = 25 / p = 10	d0 = 25 / p = 25	d0 = 32 / p = 20
500	0,7	1,9	1,5

M idle = the input torque needed to move the lifting profiles without any load.

#### Critical Speed

#### Definition of Forces and Stroke

\*\* Smax = maximum stroke between the mechanical ends of the unit. The practical stroke is normally 100 mm shorter to avoid running into the ends of the unit.

## Ball Screw Drive, Slide Guide

MGZ2K25  
screw ø25 mm

A1: depth 9, Heli coil  
A2: T-slot

MGZ2K32  
screw ø32 mm

A1: depth 12, Heli coil  
A2: T-slot

Type of unit	Minimum retracted length (L min) [mm]	Maximum extended length (L max) [mm]
Standard	$L_{min} = S_{max} + 380$	$L_{max} = L_{min} + S_{max}$
Elongated*	$L_{min} = S_{max} + 380 + L_x$	$L_{max} = L_{min} + S_{max}$

\* Elongated versions have an extra length ( $L_x$ ) added to the total length of the unit which makes the unit longer but does not add any extra length to the stroke ( $S_{max}$ ).

 » Additional data - see page 182

### General Specifications

Parameter	WZ60
Profile size (w × h) [mm]	60 × 60
Type of screw	single nut ball screw
Lubrication	central lubrication of all parts that require lubrication
Included accessories	4 × mounting clamps

### Performance Specifications

Parameter	WZ60
Stroke length (Smax), maximum	[mm] 400
Linear speed, maximum	[m/s] 1,5
Acceleration, maximum	[m/s <sup>2</sup> ] 20
Repeatability	[± mm] 0,02
Input speed, maximum	[rpm] 3000
Operation temperature limits	[°C] 0 – 80
Dynamic load (Fx), maximum	[N] 2800
Dynamic load (Fy), maximum	[N] 2000 <sup>1</sup>
Dynamic load (Fz), maximum	[N] 2000 <sup>1</sup>
Dynamic load torque (Mx), maximum	[Nm] 50 <sup>1</sup>
Drive shaft force (Frd), maximum	[N] 500
Drive shaft torque (Mta), maximum	[Nm] 30
Ball screw diameter (do)	[mm] 20
Ball screw lead (p)	[mm] 5, 20, 50
Weight	[kg]
of unit with zero stroke	4,5
of every 100 mm of stroke	0,77
of the rod with zero stroke	1,8
of every 100 mm of rod	0,26

<sup>1</sup> Also see diagrams on next page

### Rod Idle Torque (M idle) [Nm]

Input speed [rpm]	Screw lead [mm]		
	p = 5	p = 20	p = 50
150	0,7	1,0	1,4
1500	1,1	1,6	2,0
3000	1,5	1,8	2,2

M idle = the input torque needed to move the rod with no load on it.

### Definition of Forces

## Cover and Protection Kits

### FA Felt Pad Wiper

Unit type	Number of carriages on the unit	p/n	X
WH50	1	890 885 0064	6
WH50	2	2 × 890 885 0064	6
WH80	1	890 890 0069	7
WH80	2	2 × 890 890 0069	7
WH120	1	890 895 0058	8
WH120	2	2 × 890 895 0058	8
WHZ50	1	890 885 0064	6
WHZ50	2	2 × 890 885 0064	6
WHZ80	1	890 890 0069	7
WHZ80	2	2 × 890 890 0069	7

The felt pad wipers remove dust and dirt from the guides and are located on the carriage(s). They may increase the driving torque slightly but do not reduce the stroke of the unit. The felt pad wipers comes mounted from factory as standard on all WH and WHZ units but can also be ordered here as a spare part.

### Shaft Protection Cover

Unit type	p/n	A	B
M50	D312 201	126	35
M55	D312 201	151	35
M75	D700 178	198	45
M100	D700 178	202	45

The shaft protection cover is used to cover shafts which are not being used. The covers are fitted by the customer.

## Cover and Protection Kits

### Protective Bellows type 2D

Unit type	p/n	H	H1	B
2DB08	BEL-2DB-08	48	34	130
2DB12	BEL-2D-12	61	36,5	152,5
2DB12	BEL-2D-16	73	43	190,5

Bellows protect the unit from dirt and dust. Note that the bellows option reduces the available stroke of the unit by 28%. Bellows can be ordered and mounted at the factory - see ordering key. Bellows can also be ordered separately and fitted by the customer. In that case, order two pieces of bellows where the length of each bellows piece = stroke length of the unit  $\times 0.86$ .

### Protective Bellows type 2H

Unit type	p/n	B	B2	H	H1	H2	H4
2HB10	BEL-2H-10	103	81	26	11	10	0
2HB20	BEL-2H-20	199	167	48	30	15	5

Bellows protect the unit from dirt and dust. Note that the bellows option reduces the available stroke of the unit by 28%. Bellows can be ordered and mounted at the factory - see ordering key. Bellows can also be ordered separately and fitted by the customer. In that case, order two pieces of bellows where the length of each bellows piece = stroke length of the unit  $\times 0.86$ .

### Protective Bellows type 2R

Unit type	p/n	B	B2	H	H1	H2	H3	H4
2RB12	BEL-2R-12	128	75	48	37	29	15	12
2RB16	BEL-2R-16	158	95	52	43	30	15	10

Bellows protect the unit from dirt and dust. Note that the bellows option reduces the available stroke of the unit by 28%. Bellows can be ordered and mounted at the factory - see ordering key. Bellows can also be ordered separately and fitted by the customer. In that case, order two pieces of bellows where the length of each bellows piece = stroke length of the unit  $\times 0.86$ .

## Cover and Protection Kits

### Protective Shrouds

Unit type	
2HB10	see ordering key of the unit for order or <a href="http://www.LinearMotioneering.com">www.LinearMotioneering.com</a>
2HB20	see ordering key of the unit for order or <a href="http://www.LinearMotioneering.com">www.LinearMotioneering.com</a>

The protective shrouds are made of metal and protect the drive mechanism of the unit from dust and dirt but leave the guides unprotected. Shrouds do not reduce the stroke of the unit but they will add 4 mm to the width of the unit. Shrouds are ordered mounted from factory and are stated in the ordering key of the unit.

# Accessories

## Cover and Protection Kits

**Environment Protection Option Type S1 and S2, compatibility table**

Unit type	Drive type	Guide type	S1	S2	Ordering
M55	ball screw	slide	•		see ordering key of the unit for order
M55	belt drive	slide	•	•	see ordering key of the unit for order
		ball	•		see ordering key of the unit for order
M75	ball screw	slide	•		see ordering key of the unit for order
M75	belt drive	slide	•	•	see ordering key of the unit for order
		ball	•		see ordering key of the unit for order
M100	ball screw	slide	•		see ordering key of the unit for order
M100	belt drive	slide	•	•	see ordering key of the unit for order
		ball	•		see ordering key of the unit for order
WM60 / WM80 / WM120	ball screw	ball	•		see ordering key of the unit for order
WV60 / WV80 / WV120	ball screw	no guide	•		see ordering key of the unit for order
WH50 / WH80 / WH120	belt drive	wheel	•	•	see ordering key of the unit for order
WHZ50 / WHZ80	belt drive	wheel	•		see ordering key of the unit for order

The S1 and S2 environment protection options are available for some of the units as per table above. All performance data and the life expectancy are the same as for standard units except for WH and WHZ units (contact customer service for more information). S1 can be ordered for both ball screw and belt driven units with ball, slide or wheel guides while S2 only is possible for belt driven units with slide or wheel guides. Never use chemical agents and/or cleaning detergents before contacting your local Thomson customer service for advice.

### S1 - Wash down protection

Typical places where S1 is used are in slaughter houses, dairy plants, food plants or in any other light wash down application.

### S2 - Enhanced wash down protection

Typical places where S2 is used are in moderately wet areas such as in paper mills, galvanizing equipment, food industries or in any other harsh environment application where enhanced wash down capabilities are required.

## Gears and Transmission Kits

### Micron DT, DTR Planetary Gears, how to order

When ordering a DT or DTR planetary gear you need to state the size and type of gear, which side of the unit the gear shall be installed, the gear ratio and which motor that you wish to use. For DTR you also must state the preferred mounting position of the gear. With this information we can check if your choice of motor is possible or not and give you the correct ordering code for the gear.

#### Micron DT, ordering data

**1. Size of planetary gear**

DT60  
DT90  
DT115

**2. Type of gear**

-SS  
-DS

**3. Mounting side of the unit**

Left  
Right

**4. Gear ratio**

3:1 (only for -SS models)  
5:1 (only for -SS models)  
10:1 (only for -SS models)  
15:1 (only for -DS models)  
25:1 (only for -DS models)  
30:1 (only for -DS models)  
50:1 (only for -DS models)  
100:1 (only for -DS models)

**5. Motor**

Specify your choice of motor.

#### Micron DTR, ordering data

**1. Type and size of planetary gear**

DTR60  
DTR90  
DTR115

**2. Type of gear**

-SS  
-DS

**3. Mounting position of the gear**

Position 1  
Position 2  
Position 3  
Position 4

**4. Mounting side of the unit**

Left  
Right

**5. Gear ratio**

5:1 (only for -SS models)  
6:1 (only for -SS models)  
9:1 (only for -SS models)  
10:1 (only for -SS models)  
12:1 (only for -SS models)  
15:1 (only for -SS models)  
20:1 (only for -SS models)  
25:1 (only for -SS models)  
30:1 (only for -SS models)  
40:1 (only for -SS models)  
50:1 (only for -SS models)  
60:1 (only for -DS models)  
75:1 (only for -DS models)  
90:1 (only for -DS models)  
100:1 (only for -DS models)  
120:1 (only for -DS models)  
125:1 (only for -DS models)  
150:1 (only for -DS models)  
200:1 (only for -DS models)  
250:1 (only for -DS models)  
300:1 (only for -DS models)  
400:1 (only for -DS models)  
500:1 (only for -DS models)

## Gears and Transmission Kits

### VWZ Intermediate Shafts, dimensions

Shaft	$\varnothing A$	B	C	D	$\varnothing E$	F min.	G
VWZ-30	32	15	1,5	34	30	99	M4
VWZ-40	42	17	1,5	46	40	133	M5
VWZ-60	56	30	2	63	60	177	M6
VWZ-60V	67	35	2	73	60	205	M8
VWZ-80	82	40	2	84	80	249	M10
VWZ-100	102	50	2	97	100	283	M12

The VWZ intermediate shafts can be installed in two ways. Either directly to belt driven units (I) or to screw driven units using KRG bevel gears (II) of type VL50, VL100 or VL200. However, belt driven units with a RediMount flange can not be combined with VWZ shafts while screw driven units can, but in which case the unit must be ordered with the RediMount ID code that fits the bevel gear in question. The intermediate shaft includes tube and couplings.

### Critical Speed of Shaft

- 1: VWZ-30
- 2: VWZ-40
- 3: VWZ-60 and VWZ-60V
- 4: VWZ-80
- 5: VWZ-100

### VWZ Intermediate Shafts, data

Shaft	Mmax [Nm]	Gs [kg/m]	Gc [kg]	Js [kgm <sup>2</sup> /m]	Jc [kgm <sup>2</sup> ]	Ms [Nm]
VWZ-30	4,8	0,58	0,14	0,00011	0,00001	4
VWZ-40	6,4	0,76	0,36	0,00020	0,00008	8
VWZ-60	22,7	0,97	0,94	0,00080	0,00024	15
VWZ-60V	60,6	0,97	1,42	0,00080	0,00046	35
VWZ-80	122,7	2,00	2,98	0,00300	0,00240	70
VWZ-100	169,7	2,47	4,62	0,00580	0,00600	120

Mmax = max. shaft torque

Gs = weight of shaft

Gc = weight of coupling

Js = inertia of shaft

Jc = inertia of coupling

Ms = tightening torque

### DSP Intermediate Shafts, data

Shaft	Weight of shaft [kg]	Max. speed [rpm]	Shaft diameter [mm]
DSP-05B	$0,3 + 1,3 \times Lm$	1500	20
DSP-06B	$0,3 + 1,3 \times Lm$	1500	20
DSP-07B	$0,6 + 2,6 \times Lm$	1500	30
DSP-10B	$0,6 + 2,6 \times Lm$	1500	30
DSB--ZB	$0,6 + 2,6 \times Lm$	1500	30
DSP-TBS	$0,6 + 2,6 \times Lm$	1500	30

Lm = C/C distance between units in cm

The DSP intermediate shaft can be installed directly between two belt driven units or between two screw driven units using a TBS worm gear. The DSP shaft can not be used on units with a Redi-Mount flange. Couplings and tube are included in the shipment. Support bearings may need to be installed if the critical speed of the shaft is exceeded. See diagram. Support bearings can be ordered from your local bearing supplier.

DSP-05B/06B/07B/10B/-ZB

DSP-TBS

### Critical Speed of Shaft

1: No support bearing required

2: Support bearing required for DSP-05B and DSP-06B

3: Support bearing always required

<sup>1</sup> Hub included in spring set brake

Mounts to support end of 2HB, 2RB, and 2DB units. The brake engages upon loss of power and provides resistance to back drive rotation of ball screws due to gravitational forces when power is interrupted to the brake unit. They are pre-burnished for maximum torque capacity and come with standard NEMA 23, 34 or 42 mounting patterns for easy field retrofit. Compact size minimizes change to the overall system envelope. The 2HB, 2RB, and 2DB ordering keys can be configured with the brake as part of the assembly. See ordering keys or [www.LinearMotionengineering.com](http://www.LinearMotionengineering.com) for details. The part numbers listed here are for the brake parts as separate items.

### Spring Set Brake Hubs

<sup>1</sup> V = varied frequency. S = standard frequency.

#### LIMIT SWITCH POSITION 2HB

#### LIMIT SWITCH POSITION 2RB

Each 2HB and 2RB can be equipped with sensors inside of the profile where they are protected from mechanical damage. The systems are provided with access holes on each side of each end plate for passage of the sensor package cable. Using limit switch sensors will reduce the effective stroke. The standard position will approximately reduce the stroke by the distance listed in the Sdetract column. The 2HB, 2RB, 2HE and 2RE ordering keys can be configured with the limit switches and/or a home sensor as part of the assembly. See ordering keys or [www.LinearMotionengineering.com](http://www.LinearMotionengineering.com) for details. The part numbers listed above are for the limit switches and/or home sensors as separate items.

## Electrical Feedback Devices

### EN2 Inductive Sensors, part numbers

Sensor type	Cable length [m]	p/n
Normally closed	2	671 545 0305
Normally open	2	671 545 0304
Normally closed	10	671 545 0307
Normally open	10	671 545 0306

To be able to mount the EN2 inductive sensors on a unit the ENT14x16 sensor rail is required (see page 178) except for units WM120 and WV120 where they can be fitted directly to the profile of the unit.

### EN2 Inductive Sensors, data

Parameter	EN2
Supply voltage [Vdc]	10 – 30
Max. load current [A]	0,2
Operating distance [mm]	2
LED indicator for switch	yes
Protection class	IP67
Cable type	screened
Weight with cable L = 2 m	0,04
Weight with cable L= 10 m	0,19

### Magnetic Sensors, data

Parameter	
Max. power [W]	10
Max. voltage [Vdc]	100
Max. current [A]	0,5
LED indicator for switch	no
Protection class	IP67
Cable length [m]	3
Cable cross section [mm <sup>2</sup> ]	2 × 0,15
Operating temperature limits [°C]	-25 – 65
Weight [kg]	0,050

### Magnetic Sensors, part numbers

Sensor type	suitable units	p/n
Normally closed	M50, Z2, Z3	D535 071
Normally open	M50, Z2, Z3	D535 070

On M50 the magnetic sensors are mounted directly in the sensor slot of the profiles of the units and require no mounting bracket while Z2 and Z3 require magnetic sensor mounting brackets. The sensor is fixed in position by two M3 size locking screws (A1). The cable (A2) is molded into the sensor.

## Electrical Feedback Devices

### IG602 Encoders, data

Parameter	IG602
Supply voltage [Vdc]	
Type 1	5 ±10%
Type 2	10 – 30
Output type	
Type 1	line driver
Type 2	push-pull
Pulses per revolution [ppr]	
Type 1	100 – 2500
Type 2	100 – 600
Length (L) [mm]	
Type 1	51,5
Type 2	56,0
Weight [kg]	
Type 1	0,36
Type 2	0,36

The IG602 encoders come with mounting screws but no coupling or connector. To be able to mount the encoder to the unit, the unit must have a shaft for encoders. See the ordering keys of the units. The encoders can also be ordered mounted to the unit from factory. See ADG encoder option kit on page 170.

### IG602 Encoders, part numbers

Encoder type	Supply voltage [Vdc]	Pulses per revolution	p/n
Type 1	5	100	671 521 0194
Type 1	5	200	671 521 0195
Type 1	5	500	671 521 0196
Type 1	5	600	671 521 0197
Type 1	5	1000	671 521 0198
Type 1	5	1250	671 521 0199
Type 1	5	1500	671 521 0200
Type 1	5	2000	671 521 0192
Type 1	5	2500	671 521 0201
Type 2	10 – 30	100	671 521 0193
Type 2	10 – 30	200	671 521 0202
Type 2	10 – 30	500	671 521 0203
Type 2	10 – 30	600	671 521 0204
Type 2	10 – 30	600	

### STE001 Encoder Connector, data

Parameter	STE001
Number of poles	12
Protection class	IP67
Execution	jack
Cable entrance	straight
Weight [kg]	0,04
Part number	6715600153

### Encoder Cable, data

Parameter	p/n
5 m cable length	671 555 0068
10 m cable length	671 555 0069

The encoder cables come fitted with a STE001 encoder connector in one of the ends.

<sup>1</sup> Limit switches for these units can not be moved. On all other units the switches can be re-positioned by the customer. <sup>2</sup> Value in brackets = for short carriage.

The ES limit switch assembly is an option that is mounted at the factory. The limit switches are placed 10 mm from the mechanical ends of the unit. Each limit switch has one NO and one NC contact with positive opening action. Protection degree is IP67. Type I and II switches can be repositioned along the profile by the customer. Note! The ES limit switch option and any of the sensor rail options ENT14x16, ENF14x16 or ENK can not be mounted on the same side of the unit.

## Electrical Feedback Devices

### ENT14x16 Inductive Sensor Rail

Unit type	p/n
WH40 / WH50 / WH80 / WH120 / WHZ50 / WHZ80 / WM40 / WM60 / WM80 / WM60Z / WM80Z / WV60 / WV80 / MLSM60D / MLSM80D / MLSH60Z / MLSM80Z / WZ60 / WZ80 / WB40 / WB60	671 545 0283

The ENT14x16 inductive sensor rail is mounted to the side of a unit or along any type of beam or profile. Sensors of type EN2 can be mounted in the rail. The rail can also serve as a cable duct for the sensor cables. The rail is sealed with a cover which comes with the rail. The rail comes in lengths of max 3000 mm. Drilling in the profile of the unit is required when mounting the rail. When ordering, specify part number and length of the rail. Note1! WM120 and WV120 units do not require any rail as the EN2 sensors can be fitted directly to the profile of the units. Note2! ES limit switch option and ENT14x16 rail can not be mounted on the same side of the unit.

### ENF and ENK Inductive Sensor Rail Option Kit, compatibility table

Unit type	ENF / ENK
WH40 / WH50 / WH80 / WH120 / WHZ50 / WHZ80 / WM40 / WM60 / WM80 / WM60Z / WM80Z / WV60 / WV80 / MLSM60D / MLSM80D / MLSH60Z / MLSM80Z / WZ60 / WZ80 / WB40 / WB60 / M50 / M75 / M100	•

The ENF and ENK inductive sensor rail option kits are mounted at the factory. The ENF option consists of two 500 mm long ENT14x16 sensor rails mounted in each end of the unit on the left or right side of the profile. In cases where the unit is too short to allow two 500 mm sensor rails to be mounted, then one rail is mounted along the entire profile of the unit. The ENK option also consists of ENT14 x16 sensor rails but the ENK option has sensor profiles that run along the entire profile of the unit. In the shipment of both ENF and ENK the specified amount and type of EN2 sensors are included. The sensors are fitted to the sensor rail by the customer at the desired positions.

**Note1!** WM120 and WV120 units do not require any ENF or ENK options as the EN2 sensors can be fitted directly to the profile of the units.

**Note2!** The ES limit switch option and ENF rail can not be mounted on the same side of the unit.

**Note3!** Movopart M50/75/100 units require adapter plates for mounting the ENF/ENK to the profile. See page 135 for adapter plate dimensions.

**WM40S, WM40D, WM60S, WM60D, WM60X, WM80S, WM80D, WM120D**

1	2	3	4	5	6	7	8	9	10
WM06D	20	LX	ZZ6	-02545	-03715	A	Z	0520	S1

### 1. Type of unit

WM04S = WM40S unit with single ball nut  
 WM04D = WM40D unit with double ball nuts  
 WM06S = WM60S unit with single ball nut  
 WM06D = WM60D unit with double ball nuts  
 WM06X = WM60X unit with left/right screw  
 WM08S = WM80S unit with single ball nut  
 WM08D = WM80D unit with double ball nuts  
 WM12D = WM120D unit with double ball nuts

### 2. Screw lead<sup>1</sup>

05 = 5 mm  
 10 = 10 mm  
 20 = 20 mm  
 40 = 40 mm  
 50 = 50 mm

### 3. Transmission type

LX = inline style, directly coupled,  
 RediMount flange  
 SX = inline style, directly coupled,  
 no RediMount flange

### 4. RediMount motor ID code

vvv = alphanumeric motor code for suitable  
 RediMount flange when motor is known  
 999 = RediMount code used when motor is  
 unknown  
 XXX = for units without RediMount flange

### 5. Maximum stroke (Smax)

-xxxxx = distance in mm

### 6. Total length of unit (L tot)

-yyyyy = distance in mm

### 7. Drive shaft / RediMount configuration<sup>2</sup>

A = single shaft without key way  
 C = single shaft with key way or RediMount  
 G = double shafts, first without key way and  
 second for encoder  
 I = double shafts, first with key way or  
 RediMount and second for encoder<sup>3</sup>

<sup>2</sup>See below for the definition of shafts.

Single and double shafts with RediMount

Single and double shafts without RediMount

<sup>3</sup>Drive shaft configuration I not available for WM 40.

<sup>4</sup>See table below for available combinations of units and carriage types.

### 9. Distance between double carriages (Lc)

0000 = always for single carriages  
 zzzz = distance in mm

### 10. Protection option<sup>5</sup>

S1 = wash down protection (not available for WM04 units)

<sup>1</sup>See table below for available combinations of units and ball screw leads.

Type of unit	Available screw leads [mm]				
	5	10	20	40	50
WM04S	x				
WM04D	x

## Linear Motion Systems with Lead or Ball Screw Drive and Ball Guides

### 2DB08, 2DB12, 2DB16

1	2	3	4	5	6	7	8	9	10	11
2DB12	F0	N0250	-300	N	002	A	0	A	0	0

#### 1. Type of unit

2DB08 = 2DB08 unit

2DB12 = 2DB12 unit

2DB16 = 2DB16 unit

#### 2. Screw type, diameter, lead and nut type

A0 = leadscrew, 0.375 in, 0.100 in, preloaded (2DB08 only)

B0 = leadscrew, 0.375 in, 0.250 in, preloaded (2DB08 only)

C0 = leadscrew, 0.375 in, 0.500 in, preloaded (2DB08 only)

D0 = leadscrew, 0.375 in, 0.750 in, preloaded (2DB08 only)

E0 = leadscrew, 0.375 in, 1.000 in, preloaded (2DB08 only)

F0 = ballscrew, 0.631 in, 0.200 in, non-preloaded (2DB12 only)

V0 = ballscrew, 0.631 in, 0.200 in, preloaded (2DB12 only)

QJ = ballscrew, 0.500 in, 0.500 in, preloaded (2DB12 only)

G0 = ballscrew, 0.750 in, 0.200 in, non-preloaded (2DB16 only)

W0 = ballscrew, 0.750 in, 0.200 in, preloaded (2DB16 only)

RJ = ballscrew, 0.750 in, 0.500 in, preloaded (2DB16 only)

LJ = ballscrew, 0.631 in, 1.0 in, preloaded (2DB16 only)

D0 = ballscrew, 20 mm, 5 mm, preloaded (2DB16 only)

#### 3. Ordering length (L)

N xxxx = distance in inch (e.g. 0250 = 25 inch)

#### 4. Y-distance

- 200 = standard distance in inch between motor end plate to first set of mounting holes for 2DB08 (e.g. 200 = 2 in)

- 300 = standard distance in inch between motor end plate to first set of mounting holes for 2DB12 and 2DB16 (e.g. 300 = 3 in)

- yyy = custom distance in inch between motor end plate to first set of mounting holes

#### 5. Brake option

N = no brake

B = brake

#### 6. RediMount motor ID code

001 = NEMA 23

002 = NEMA 34

zzz = consult [www.LinearMotioneer.com](http://www.LinearMotioneer.com) for complete list of available standard RediMount motor flanges

#### 7. Ball guide shaft coating option

A = standard, 60 Case

B = stainless steel (440C)

C = chrome plated

E = Armoloy

#### 8. Bearing option

0 = standard

1 = corrosion resistance

#### 9. Profile cover option

A = none

B = bellows (bellows will reduce stroke length app. 28%)

#### 10. Hardware option

0 = alloy plated

1 = stainless steel

#### 11. Home and end of stroke sensor option

0 = no sensors

7 = home

8 = ends of travel

9 = both

# Terminology

## Basic Linear Motion System Terminology

### Screw Driven Unit

### Belt Driven Unit

**Note!** both units are pictured without a RediMount™ flange

\* Both screw and belt driven units can have single or double carriages.

# Glossary

## A - Belt D

### Acceleration

Acceleration is a measure of the rate of speed change going from standstill (or a lower speed) to a higher speed. Please contact customer service if your application is critical to which acceleration rate is acceptable or needed.

### Accuracy

There are several types of accuracy and many different factors that will affect the overall accuracy of a system. Also see "Repeatability", "Positioning Accuracy", "Resolution", "Lead Accuracy" and "Backlash".

### Backlash

Backlash is the stack up of tolerances (play) within the leadscrew/belt transmission assembly and gearing which creates a dead band when changing directions. The result is that the motor can rotate some before any motion can be seen on the carriage when reversing the direction of the motor rotation. The backlash varies depending of the liner motion system model.

### Ball Guides

A ball guide consists of a ball rail and a ball bushing. The ball rail is made of hardened steel and runs along the inside of the profile. The ball bushing is attached to the carriage of the unit and contains balls that roll against the rail. The balls in the bushing can be recirculating or have fixed ball positions depending on the type of ball guide. The recirculating type has a longer life and better load capability while the fixed type typically is much smaller. Thomson uses three major types of ball guides in its linear motion systems. Either the compact single rail type with recirculating ball bushing (A), the stronger double rail type also with recirculating ball bushings (B) or the fixed ball position ball bushings type (not shown) which require very little space and are used in the smallest units. Ball guides offer high accuracy, high loads and medium speed.

### Ball Screw Drive

A ball screw is made up of a rotating screw and a moving ball nut. The ball nut is attached to the carriage of the unit. It does not have a normal thread, instead balls circulate inside the nut making it work as an efficient ball bearing that travels along the screw. Ball screws come in a large variety of leads, diameters and tolerance classes. The tolerance class (T3, T5, T7 or T9) indicates the lead tolerance of the screw. The lower the number, the higher the tolerance. High load capability and high accuracy are typical features of ball screw driven units.

### Bearing Housing

Screw driven units has two bearing housings, front and rear. The front bearing housing has a drive shaft while the rear has none. Sometimes however the rear housing can have an optional output shaft which is used to connect to an encoder.

### Bell House Flange

A bell house flange is used when a motor should be connected directly to the drive shaft of a linear motion system, i.e. when it is direct driven. The bell house has the bolt pattern of the motor flange in one end and the bolt pattern of the drive shaft flange in the other while the two shafts are joined by a coupling. Also see "Direct Drive".

### Belt Drive

A belt drive consists of a toothed belt which is attached to the carriage of the unit. The belt runs between two pulleys positioned at either end of the profile. One pulley is attached to the motor via the drive shaft in the drive station while the other is mounted in a tension station. The belts are made of plastic reinforced with steel cords. High speeds, long stroke, low noise and low overall weight are typical features of belt driven units.

# Glossary

## Belt G - C

### Belt Gear

A belt gear consists of a timing belt that runs between two pulley wheels of different diameters. The difference between the diameters determines the gear ratio. Belt gears are quiet, have medium accuracy and require no maintenance but are susceptible to belt breakage under overload conditions.

### Brake

None of the units are equipped with a brake or are self-locking which means that a vertical unit will drop the carriage/load if no external brake (such as a brake in the motor, etc.) is applied to the drive shaft. In the case of belt driven units care must be taken as the carriage/load will drop immediately in the case of a belt breakage. This is particularly important in vertical applications. You also may want to incorporate a brake in to the system to ensure fast and secure stops at an emergency stop or a power failure. In this case the brake should be of the failsafe type, i.e. a brake that is engaged when power is off and lifted when it is on.

### Carriage

The carriage is the moving member which travel along the profile of the unit to which the load is attached. Some units can have multiple carriages in order to distribute the weight of the load over a greater distance, this will however reduce the available stroke for a given profile length. There are also units having the option of short or long carriage. The short can carry less weight than a standard one but has a slightly longer stroke for a given profile length while the longer works the other way around. It is possible to fix the carriage(s) to the foundation and let the profile act as the moving member if so desired. This is often the case in vertical applications where you let the profile lift and lower the load.

### CE Certificate

Linear motion systems do not need and do therefore not have any CE certification. All Thomson linear motion systems are however designed in accordance with the CE regulations and comes with a manufacturers declaration to prove this. Once the linear motion system is used or made in to a machine it is the responsibility of the end customer to make sure the entire machine that the linear motion system is a part of is in accordance with the applicable CE regulations, produce the documents that proves this and apply a CE mark to the machine.

### Cover Band

Cover bands are used on some units to protect them from the ingress of foreign objects through the opening in the profile where the carriage runs and can be made of plastic (A) or stainless steel (B). In the case of plastic the cover band seals the profile by snapping into small grooves running along the carriage opening. In the case of stainless steel the cover band seal the profile magnetically using magnet strips mounted on each side of the carriage opening. Some units also have a self-adjusting

cover band tensioning mechanism that eliminates any slack in the cover band that can occur from temperature changes, thus improving the sealing degree and the expected life of the cover band.

A

B

### Critical Speed

All ball screws have a critical speed where the screw starts to vibrate and eventually bend or warp the screw. The exact limit is a function of how long the screw is and the speed. For some units this means that the allowed maximum speed found in the performance specifications can be higher than the critical speed when the stroke exceeds a certain distance. In this case, either the speed must be reduced to the critical speed, the amount of stroke must be reduced, or you must use the screw support option if the unit in question allows this. Otherwise you must select another unit that can manage the speed at that stroke. The critical speed limits can be found in the "Critical Speed" diagrams on the product pages of the units that this concern.

### Customization

Despite the large range of linear motion systems offered by Thomson you may not find the exact unit to suit your application. But whatever your need is, Thomson is ready to help you to customize a unit according to your requirements. Please contact customer service for more information.

### Cycle

One cycle is when the carriage has travelled back and forth over the complete stroke of the unit one time.

# Glossary

## D - E

### Deceleration

Deceleration is a measure of the rate of speed change going from a higher speed to a lower speed (or standstill). Please contact customer service if your application is critical to which deceleration rate is acceptable or needed.

### Definition of Forces

The designations of the forces that acts on the unit are defined on the product page of each unit in the "Definition of Forces" drawing (see example below). Please always use the same definitions whenever communicating with Thomson.

### Deflection of the Profile

Some units require support along the whole profile whilst some are self-supporting over a specified span. Further details can be found on the product data pages. The recommended support intervals should be followed to minimize deflection of the unit. The maximum distance between the support points is shown on the product data pages. The deflection of the unit can also be calculated using the information in the "Additional data and calculations" section.

### Direct Drive

Direct drive means that there is no gearing between the motor and the drive shaft of the linear motion system. Instead the motor is connected to the unit directly via a coupling and a bell house adapter flange. Also see "Bell House Flange".

### Double Ball Nuts

Using double ball nuts will increase the repeatability of the unit. The ball nuts are installed so that they are pre-tensioned against each other eliminating the play between the nuts and the screw. A double nut unit will have a slightly shorter stroke for a given overall length.

### Double Carriages

Double carriage units have two carriages which gives them higher load capabilities than single carriage units. When ordering a double carriage unit the distance between the two carriages needs to be defined. This distance is called  $L_A$  or  $L_c$  depending on the model.

### Drive Shaft

The drive shaft is the shaft to which the motor is connected, either directly, via a bell house flange or via a gear box. There are many sizes and types of drive shafts, such as shafts with or without key way or hollow shafts, depending on the type and size of the unit. Belt driven units can often have two drive shafts (same or different type and size), one on each side of the drive station, while screw driven only have one pointing out of the end of the unit. Customized drive shafts are possible, please contact customer service for more information.

### Drive Station

The drive station is the mechanical assembly in one of the ends of a belt driven unit where the drive shaft is situated.

### Duty Cycle

All units are designed for a 100% duty cycle. However, where the unit runs at extreme load, speed, acceleration and temperature or for long operating periods the expected life time may be reduced.

### Encoder Feedback

Encoders provide a digital output signal in the form of a square shaped pulse train that can be used to determine the position of the extension tube. The encoder signal in a servo motor system is connected to the motion control so that it can control the servo drive and hence close the position feedback loop.

### End of Stroke Limit Switches

If a unit runs at speed to the ends of its stroke there is a risk of damage. Damage can be prevented by using end of stroke limit switches to detect and engage a brake and/or cut power to the motor when the unit nears the end of the unit. You must ensure that there is sufficient distance between the end of stroke limit switch and the end of the unit, to allow the carriage to come to a complete stop before colliding with the end. The required stopping distance depends on the speed and the load and will have to be calculated for each application. The stopping distance must be taken into account when defining the necessary stroke.

# Glossary

## G - M

### Guides

Guides are in essence a form of linear bearings on which the carriage(s) travel. Thomson uses three main types of guides that all have different characteristics and which to choose depends on the demands of the application. Also see "Ball Guides", "Slide Guides" and "Wheel Guides".

### Idle Torque

Idle torque is the torque needed to move the carriage with no load in it by rotating the drive shaft. The idle torque will vary with the input speed and the idle torque tables on the product pages gives a value for some speeds. The value given in the table is for a unit having a single carriage of standard length. If you need the exact value for another speed, multiple carriages or short/long carriages, please contact our customer service.

### Inertia

Inertia is the property of an object to resist speed changes and is dependent on the shape and the mass of the object. The inertia is important when sizing and selecting and also when tuning a servo system to optimum performance. Consult customer service for more information.

### Input Shaft

The input shaft is the shaft to which the power source (motor) is connected to on a gear box. Primary shaft is another term for this. Sometimes the drive shaft on a linear unit also is referred to as the input shaft.

### Input Speed

Input speed is the rotational speed that the drive shaft/input shaft of a linear motion system or a gear box is subjected to.

### Installation and Service Manual

Each linear motion system has an installation and service manual to answer typical questions about mounting and servicing the unit.

### Lead Accuracy

Lead accuracy is a measure of how accurate the lead of a ball screw is. For a ball screw with a lead of 25 mm, the screw should in theory move the nut 25 mm per each revolution. In reality there will be a deviation between the expected traveling distance and what is actually achieved. The deviation is typically for a ball screw 0,05 mm per 300 mm of stroke. Contact customer service for more information.

### Left/right Moving Carriages

Units with left/right moving carriages have two carriages moving in opposite directions when the drive shaft is rotated. This type of unit has a ball screw where half of the screw has a left hand thread and the other half a right hand thread.

### Lifetime Expectancy

When determining the lifetime for a linear motion system it is necessary to evaluate all forces and moments that are acting on the unit. The data and formulas given in this catalogue serve as a basis for this. For a more detailed lifetime calculation please use our sizing and selection software. Please contact us for further guidance.

### Linear Lifting System

A linear lifting system is in essence a linear motion system specially designed for vertical lifting applications. Some units can be used in horizontal applications as well under certain criteria. Please contact us if you plan to mount a lifting unit in any other position than vertically with the load carrying plate pointing down.

### Linear Motion System

A linear motion system is a mechanical assembly that translates the rotating motion of a motor to the linear motion of a carriage that travel along a load supporting beam/profile. Other names for linear motion systems are linear units, linear drive units and rodless actuators among others.

### Load Rating

There are many types of load ratings that all needs to be considered. Normally when you speak about the load you refer to the load that the carriage will move; which is the dynamic load. But there may also be static, side, moment and forces from acceleration, deceleration, gravity and friction that are all equally important. For some units the load and load torque values are given for both the complete unit and the guiding system. The values for the complete unit are the values under which the unit can operate. The values for the guiding system should only be used when comparing different units and do not describe the actual performance of the complete unit.

### Maintenance

Most units require lubrication. General lubrication requirements can be found in the general specifications table on the product data pages. The lubrication intervals, grease qualities and specific lubrication instructions can be found in the installation and service manual of each unit. No other regular maintenance is needed except for normal cleaning and inspection. Units with a cover band may also require irregular cover band replacement due to wear. The belt in belt driven units should not require re-tensioning under normal operating conditions.

### Manufacturers Declaration

All Thomson linear motion systems comes with a manufacturers declaration to prove that it is built according to the CE regulations.

### Mounting

Most units can be mounted in any direction. Any restrictions on mounting positions are shown on the product presentation pages at the beginning of each product category chapter. Even where units may be mounted in any direction there are some considerations. None of the units are self-locking which means that a vertical unit will drop the carriage/load if no

# Glossary

## N - Sc

external brake (such as a brake in the motor, etc.) is applied to the drive shaft of the unit. In the case of belt driven units care must be taken as the carriage/load will drop immediately in the case of a belt breakage. This is particularly important in vertical applications. All ball screw driven units are equipped with a safety nut to prevent the carriage/load being released in case of ball breakage.

### Non-driven Linear Motion Systems

A non-driven linear motion system has no drive shaft or any type of transmission. In reality a non-driven linear motion system is a guide that has the same look and outer dimensions as the driven version. Normally a non-driven unit is used together with a parallel working driven unit that are mechanically linked where the non-driven unit help to share the load with the driven one.

### Non-guided Linear Motion Systems

A non-guided linear motion system has a drive shaft and a ball screw but no guides. In reality a non-guided linear motion system is an enclosed ball screw assembly with a carriage that has the same look and outer dimensions as the driven version. Using a non-guided unit requires some kind of external guide to which the carriage can be attached.

### Operation and Storage Temperature

Operational temperature limits can be found in the performance tables on the product data pages. Units can be stored or transported within the same temperature range. Please contact us if the unit will be exposed to higher/lower temperatures than recommended during storage or transportation.

### Output Shaft

The output shaft is the shaft on a gear box that is connected to object being driven by the gear box. Another term for output shaft is secondary shaft.

### Packages and Multi Axis Kits

Thomson can offer complete pre-defined packages (linear motion system, gear and servo motor assembled and shipped with servo drive and cables) as well as mounting kits for the creation of two and three axis systems. Please contact us for further information.

### Positioning Accuracy

Positioning accuracy is the error between the expected and actual position and is the sum of all factors that will reduce the accuracy (i.e. repeatability, backlash, resolution, screw/belt accuracy, and the accuracy of the motor, drive and motion control system). Some of these factors, such as backlash and lead accuracy, can sometimes be compensated for in the software of the motion control system being used. Also see "Accuracy".

### Position Feedback

The position of the carriage/rod/lifting profile can be obtained in many ways. The most common way is to equip the unit with an encoder or to use a motor which has a built in feedback device (encoder, resolver, etc.). To many units there are encoders or/and encoder mounting kits available. See the accessory chapter.

### Repeatability

Repeatability is the ability for a positioning system to return to a location when approaching from the same distance, at the same speed and deceleration rate. Some of the factors that affect the repeatability are the angular repeatability of the motor, drive and motion control system, system friction and changes in load, speed and deceleration.

### Resolution

Resolution is the smallest move increment that the system can perform. Some of the factors that affect the resolution are the angular repeatability of the motor, drive and motion control system, system friction, the drive train reduction, the lead/type of the ball screw/belt and changes in load, speed and deceleration.

### Resolver

A resolver is basically a type of rotary electrical transformer used for measuring degrees of rotation and are commonly used on AC servo motors as a feedback device to control the commutation of the motor windings. The resolver is mounted to the end of motor shaft and when the motor rotates the resolver will transmit the position and direction of the rotor to the servo drive which then can control the motor. Most servo drives for AC servo motors on the market today can convert the resolver signal into a pulse train (encoder signal simulation) which can be used by a motion control to determine and control the position of the motor. Also see "Encoder Feedback".

### RoHS Compliance

The RoHS directive stands for "the restriction of the use of certain hazardous substances in electrical and electronic equipment". This directive bans the placing on the EU market of new electrical and electronic equipment containing more than agreed levels of lead, cadmium, mercury, hexavalent chromium, polybrominated biphenyl (PBB) and polybrominated diphenyl ether (PBDE) flame retardants. All linear motion systems and accessories sold in the EU are RoHS compliant.

### Screw Supports

Screw supports allow screw driven units to travel at high speed even when stroke becomes longer. The supports reduce the unsupported length of the screw, that otherwise would be subjected to vibrations. Screw supports come in single (one screw support on each side of the carriage) or double (two supports on each side) versions. Screw support units will have a slightly shorter stroke for a given overall length.

# Glossary

## Si - W

### Single Carriage

Single carriage units have one carriage. Some linear motion system models also have the option of long or short single carriages. The long carriages handle higher loads but will have a longer overall length for a given stroke.

### Sizing and Selection

This catalog can give you an overview of what Thomson can offer you and an indication of which products that may suit your application. But in order to get the best solution it is necessary to know your specific application and to carry out detailed sizing and selection calculations. Please contact customer service for further help.

### Slide Guides

A slide guide consists of a guide attached to the inside of the profile and a slide bushing attached to the carriage. The guide can be made of different materials (e.g. polished hardened steel, anodized aluminum) while the bushing is made of a polymer material. There are two types of bushings, fixed and prism. Prism bushings can move in relation to the guide which results in longer life and higher load capabilities. Slide bushings are silent, simple, reliable and robust and can be used in dirty and dusty environments. They are also resistant to shock loads, have a long life expectancy and require little or no maintenance.

### Stroke

The theoretical maximum stroke ( $S_{max}$ ) is the length that the carriage can travel from one end of the unit to the other. However, using the maximum stroke means that the carriage will collide with the ends of the profile. The practical stroke is therefore shorter. We recommend that you specify a unit that have at least 100 mm longer stroke than the maximum stroke you need so that the unit can stop before colliding with

the ends and also allow for some adjustment of the unit position at the mounting.

### Tension Station

The tension station is the mechanical assembly situated in the opposite end of the drive station on a belt driven unit. The tension station has a mechanism that allows the belt pulley position to be adjusted thus changing the tension of the belt. Adjustment of the belt tension is normally only necessary when replacing a broken or worn out belt with a new.

### Wheel Guides

A wheel guide consists of ball bearing wheels that run on a hardened steel rail. Wheel guides are a simple and robust guiding method offering high speeds, high loads and medium accuracy.

### Working Environment

All units are designed for use in normal industrial environments. Units which have an open profile (i.e. have no cover band) are more sensitive to dust, dirt and fluids. These units require some kind of cover if they are used in environments where dust, dirt or fluids are present. Wash down or enhanced wash down protection can be ordered for our closed profile units. Please refer to the accessory pages. In all cases where a unit will be exposed to aggressive chemicals, heavy vibrations or other potentially harmful processes we recommend that you contact us for further advice.
